

GoGet.my — Deep Research Report

Malaysia's on-demand workforce platform. Compiled June 2026 from ~50 web sources across 5 research tracks. Figures cluster around 2020–2022; the most recent hard data points are from July 2024. Where sources conflict, it is flagged.

1. Company Snapshot

Field	Detail
Brand	GoGet (GoGet.my)
Legal entity	Eternal Meteor Sdn Bhd
HQ	Kuala Lumpur / Klang Valley, Malaysia
Founded	2014 (launched / operating ~2015)
CEO	Francesca Chia (co-founder)
Category	On-demand workforce / gig marketplace / HR-tech
Workers	"GoGetters" — ~40,000 verified (2024)
Funding	~US\$2M Series A (2020), led by Monk's Hill Ventures
Status	Independent, venture-backed, operational

GoGet is frequently described as **"Malaysia's TaskRabbit"** — a two-sided marketplace connecting consumers and businesses with a pool of verified part-time / gig workers for deliveries, errands, staffing, and labour.

2. Founding Story & Background

GoGet was founded in **2014 in Kuala Lumpur**. The origin story is now part of Malaysian startup folklore: founder **Francesca Chia**, then ~26 and working 80–100 hour weeks as a management consultant at **Boston Consulting Group (BCG)**, hit on the idea during "mamak" (roadside eatery) conversations about work-life balance. The catalyst question was "What if we could pay someone to run our errands?" The team built the product over ~9 months in their spare time before going full-time.

At launch it was positioned as **Malaysia's first online marketplace for errands and deliveries**, compared to TaskRabbit, Airbnb, and MyTeksi (now Grab).

Founding mission: close the gap between time-poor urban professionals and an underutilised pool of people wanting flexible work — letting people escape the binary of "full-time job vs. fixed 8-hour shift." Chia's university dissertation (Northwestern, Economics,

2006–2010) was reportedly on using upskilling to reduce unemployment — a stated influence.

Leadership

- **Francesca Chia** — Co-Founder & CEO. Ex-BCG consultant; WEF Young Global Leader (2021); active gig-policy advocate.
- **Tan Fung Wei** — Co-Founder & CTO (also rendered "Tan Tai Fung Wei").
- **Muaz Jema** — Co-Founder & Financial Controller.

Flag: A few aggregator sources (TechCrunch, Tracxn) list a co-founder named "**Matt Fischer**." This conflicts with the consistently cited Chia / Tan / Jema trio from company-registry sources and is most likely a data-aggregator error.

3. Business Model & Revenue Streams

GoGet runs a **commission-plus-platform-fee marketplace**, layered over time with enterprise SaaS and managed-staffing lines:

Revenue stream	How it works
Commission / management fee	A management ("access") fee on business jobs — currently 15% (was a 10% option + prepaid plans in 2020). Unlocks dashboard, recruiting, automated deliveries, insurance, priority support.
Prepaid credit packages	Businesses buy GoGet Business Credits (no contracts); job fees + GoGetter pay are drawn down from the balance.
GoGet Projects	High-touch, account-managed staffing — GoGet handles recruitment, screening, and management. Min. 1 month, ≥5 workers/day.
Cloud workforce SaaS	Platform licensed to companies to digitise / manage their own manual workforces (announced around Series A).
Delivery API	Free to integrate; monetised via per-delivery job fees.
Worker financial services (emerging)	Stated vision to offer GoGetters savings / insurance — a potential future stream.

Flag: The 10% → 15% fee shift reflects pricing changes over time; confirm live in-app.

4. Services Offered

Consumer services (app splits jobs into Dispatch / Sales & Marketing / Part-time / Projects):

- **Delivery & dispatch** — same-day / on-demand, "deliver almost anything"
- **Food & shopping** — personal shopper buys, pays, delivers
- **Moving & household** — moving, packing, repairs, gardening, cooking, chores

- **Pet care** — dog walking, feeding, vet visits
- **Part-time / event staffing** — promoters, flyer distribution, booth crew, waiters, merchandisers, warehouse pick-and-pack, data entry, admin (30+ job types)

Business solutions (GoGet for Business):

- **GoGet Business** — supports gig / contract / part-time / full-time hiring; dashboard, insurance, integrations
- **GoGet Recruit** — screen 40,000+ verified GoGetters by experience, education, location, ratings; "Train & Build" a regular pool
- **GoGet Projects** — managed staffing for enterprises
- **Delivery API** — integrate online orders for fulfilment (1-2 week setup)
- **HR outsourcing** — retail, hypermarket, e-commerce, F&B, events

How it works operationally

Booking → poster creates job, app auto-quotes the fee → matched with a verified GoGetter (businesses pick from applicants via Recruit). **Vetting** → ID verification + criminal background check + service-quality training + culture-fit test; ratings on every worker.

Payment → escrow model: payment held by GoGet, disbursed to the GoGetter (cash, bank transfer, or cashless GoGet Pay / Credits → e.g. Touch 'n Go).

Indicative pricing

- **Dispatch:** flat fee + distance + effort + timing; minimum ~RM6, roughly RM0.80–1.20/km
- **Part-time:** ~RM12/hr basic tasks, RM15–20/hr skilled; GoGetter earnings start ~RM10/hr
- **Business:** 15% management fee + prepaid credits; Projects custom-quoted

Specific RM bands come from support-page extracts and may be outdated — GoGet auto-quotes live in-app.

5. Strategic Evolution — Three Phases

1. **2014 - ~2018 — Consumer errands marketplace.** Peer-to-peer errands, deliveries, dispatch, moving, grocery runs. Expanded to Penang.
2. **~2018 — Platform-as-a-Service for business.** Began offering its job-assignment / tracking tech to corporations managing distributed workforces. Chia framed this as a new layer, not a pivot.
3. **2020 - present — On-demand workforce / HR-tech platform.** Repositioned as an end-to-end HR system spanning **HIRE → MANAGE → PAY → TRAIN → ENGAGE** across gig / part-time / contract / full-time ("blended workforce"). COVID-19 sharply accelerated adoption.

No formal rebrand — it has always been "GoGet." The shift is strategic repositioning (errands → workforce HR platform), not renaming.

6. Funding & Investors

Round	Date	Amount	Lead / Investors
Seed	Sep 2015	Undisclosed	500 Startups (500 Durians / 500 Global) — their first MY investment
Series A	Oct 2020 (closed Sep 2020)	US\$2M (~RM8.3M)	Monk's Hill Ventures (lead)
Grant	Jul 2019	Prize / support	UNCDF FinLab B40 Challenge winner

- **Total raised:** databases disagree — **US\$2.5M** (Crunchbase) vs **US\$2.59M / US\$3.33M** (Tracxn). Only ~US\$2M is documented from named press rounds; the rest is undisclosed seed / grant amounts.
- **Investor roster:** Monk's Hill Ventures, 500 Global, **Cradle Fund**, **MAVCAP**, **UNCDF**, plus ~9 unnamed angels (Tracxn).
- **Valuation:** ~US\$7.19M post-Series A (Tracxn estimate, not company-confirmed).
- **Accelerators:** 500 Startups Distro Dojo graduate (2016, with MaGIC); UNCDF FinLab B40 winner (2019).

Two corrections to common misconceptions: 1. **PETRONAS did NOT invest in GoGet.** Headlines pairing the two refer to Petronas investing in other 500-portfolio startups (Braintree, SOLS Energy); GoGet appeared only via its IKEA / Ikano partnership. 2. **No funding round after 2020** could be found. No acquisition or merger either — GoGet remains independent.

7. Performance, Scale & Metrics

Metric	Figure	As of
GoGetters	~10k → 20k (doubled in COVID) → 40,000	2020 → 2024
Businesses served	5,000 → 7,000	2020 → 2024
Users	~250,000–300,000	2020–2022 (soft)
Headcount	~25 employees	~2020–21 (likely outdated)
Coverage	Klang Valley, Penang, Johor Bahru, Negeri Sembilan	—

- **GMV / revenue: NOT publicly disclosed.** Any figure on Growjo / Tracxn / PitchBook is a modeled third-party estimate, not company data.
- **Profitability: unstated.** Chia has called reaching a "sustainable business model" the biggest challenge.

- **COVID inflection (2020):** the network "almost doubled" to 20,000; GoGet onboarded thousands within days of the March 2020 MCO and "trained a month's worth of workers in one weekend." This pandemic surge is the company's defining growth story.
- **Workforce demographics:** students, professionals, homemakers, retirees ("retirees to Gen-Z," 18+); largely B40 (low / moderate income). Notable gender shift — female GoGetters rose from **30% (Mar 2020) → 45% (Oct 2021)**.
- **Named clients:** Lazada Malaysia, IKEA Malaysia, foodpanda, BloomThis, Maxis Business, L'Oréal Paris, Mandarin Oriental, Yodo, FashionValet, Ikano Centres.

The ~300k user figure recurs in both 2020 and 2022 sources — treat the user timeline as fuzzy. The business count (5k → 7k) is cleaner.

8. Competitive Landscape & Differentiation

Differentiation: Unlike single-vertical delivery / e-hailing players, GoGet positions itself as a **blended-workforce HR system** (hire → manage → pay → train → engage), claiming to be first in Malaysia to digitise the whole HR process for gig + part-time + contract + full-time work.

Competitor type	Players
Logistics / delivery	Lalamove, Grab (GrabExpress), foodpanda, ShopeeFood
Gig staffing	FastGig, Kiddocare (childcare), Halo Delivery
E-hailing (adjacent)	Grab (dominant; ~32 e-hailing apps in MY), Bolt, inDrive
Niche local	Supahands (micro-tasks / AI labeling), Kaodim (home services)

Mr Speedy / Borzo, Workstore, Kerja appear in general gig listings but not in head-to-head GoGet comparisons.

9. Partnerships

- **EPF (Feb 2022)** — Malaysia's **first integrated EPF retirement-savings feature inside a gig app** (i-Saraan "contribute as you earn"). A signature differentiator.
- **PERKESO / SOCSO** — gig-worker social-security protection program.
- **MDEC / UNCDF** — selected for the UNCDF Financial Innovation Lab at MDEC; B40 programme partner (social security, in-app financial literacy, job placement).
- **Corporate clients** — telcos (on-demand SIM delivery), Lazada, IKEA, foodpanda, BloomThis, and more.

10. Recent Direction & Regulatory Context (2023-2026)

Strategic direction:

- Deepening the **HR-tech / blended-workforce** positioning; **GoGet Recruit** is the flagship enterprise product.
- Stated vision of "a sustainable future of work across **ASEAN**"; Chia moderated an AI panel at the **ASEAN AI Malaysia Summit 2025**. No confirmed regional operations outside Malaysia yet, and no new funding since 2020.
- **Awards:** HR Vendors of the Year — Runner-Up Best Recruitment Portal (2023), **Winner Best Recruitment Portal (2024)**.

The central regulatory story — Gig Workers Act 2025 (Act 872):

- Passed Dewan Rakyat **Aug 2025**, gazetted **31 Dec 2025**, in force **31 March 2026**. Covers ~1.2-1.6M gig workers. Introduces service agreements, payment certainty, a Gig Workers Tribunal, and **mandatory PERKESO / SOCSO contributions**. Billed by the government as a "world-first" comprehensive gig-worker law.
- **GoGet was a signatory** to industry coalition statements (with Bolt, FastGig, foodpanda, Grab, Lalamove, ShopeeFood, etc.) urging consultation and impact studies before tabling.
- **Chia's public critique** (The Edge, ~Feb 2026): the SOCSO structure splits gig work into **28 job-type categories** (failing multi-task workers); no real-time system to prevent **over-contribution** beyond the ~RM13.10/month ceiling; payouts based on historical not projected income; and the "on-demand live allocation" framing fits ride-hailing better than scheduled-shift platforms like GoGet.
- **Strategic implication:** mandatory social-protection compliance plays to GoGet's strengths (it already built EPF / PERKESO integrations), but the 28-category structure poses real compliance burdens.

Key Caveats

1. **No GMV / revenue / profitability disclosed** — financial performance is opaque; third-party estimates are unreliable.
 2. **Most metrics are 2020-2022 vintage**; only 40k GoGetters / 7k businesses (Jul 2024) are recent. No 2025-26 scale figures surfaced.
 3. **Co-founder roster** — Chia / Tan / Jema is well-supported; "Matt Fischer" is likely an aggregator error.
 4. **No funding since the 2020 Series A**; the company remains a relatively lean, independent Series-A-stage business.
 5. **Methodology note:** Direct page-fetching was blocked (HTTP 403) across all sources this session, so findings rest on search-engine content extraction cross-referenced across multiple independent sources — reliable for the claims, but exact verbatim figures from primary pages weren't captured.
